Marc Morata Fité

Experience

2009–currently

Senior System Engineer, *Abiquo*, Barcelona,

System administrator in software company with a cloud product that leads the market.

- Joined Abiquo when the first version of the product was not still released. I've been creating the package and the system architecture of abiquo's product since the first version (v0.6) released in April 2009.
- During 2009 implemented the platform in customers such as Ericsson or Telefonica and made presentations and training sessions to their teams.
- Development of new features critical with the architecture of the product and its performance.
- Support customers and abiquo support team on difficult support issues.
- Giving feedback to abiquo development team on customers technical needs.
- Training new abiquo personal.

2006–2008

System Administrator, *Gnuine*, Barcelona,

System administrator in a company focused in the web services and development.

- Managed the systems department (team of 3).
- Managed more than 100 servers (virtual and physical). The virtualization technology used was Xen.
- Implemented development, preproduction and production environments for ruby on rails and php for a big customers such as political parties of Catalonia, leading newspapers La Vanguardia and Spanish Basketball Federation (ACB).
- Debugged and analyzed performance problems to critical software..

2003–2004

Internship, *BITECSA*, Manresa,

Developer in a software company with a management product.

- Developed parts of the main product (Delphi and DBase).
- Developed reports in Excel (VisualBasic script).
- Sysadmin tasks such as mantain the intranet services.
- Developed a wifi application to manage inventory in a warehouse getting the warehouse a 32% time saving VS initial tool.
